

Aggressive Phase-4/5 rescue trades severe-outcome recovery against visible false promotions

P4/5 unweighted P4/5 sqrt-balance P4/5 full-balance

True P4 rescue False P1 promotion False P3 promotion
True P5 rescue False P2 promotion

Forecasting and Nowcasting use the fixed 2022 temporal holdout (n = 1,170 each). Contemporaneous uses seed-0 random five-fold row-level full-OOF predictions (n = 5,575) with thresholds selected and described on the same pooled OOF gate. Protocols and populations differ; values are not directly comparable. Rescue target = actual P4/5; allowed action = base P3 to predicted P4 only. Black outlines and '(primary)' labels mark the task-specific OOF-selected policy.
